IDENTIFIERS	*Navy

ABSTRACT

This report provides the fourth version of Navy Equal Employment Opportunity (EEO) labor market availability of people by race, sex, and national origin groups in the 64 local labor markets in which the Navy employs 250 or more civilian employees. A description of the methodology is included. Seven references are listed. Appendices provide listings of the 64 local labor markets and the projected supply ratios for 1996 of men and women by racial and national origin groups. (CML)

This report provides an update to 1996 of the Navy EEO Available Labor Force (ALF), data for each of the 64 local labor markets in which the U.S. Navy employs 250 or more civilian employees. An improved reservation wage methodology was used to take advantage of lessons learned from the previous publication of these data in 1986.

FOREWORD

Research Report No. 51 was prepared as part of the activities of the Assistant for Human Resources Analysis (OP-16H). This report provides an updated projection to 1996 of the Navy EEO availability data for each of the 64 local labor markets in which the U.S. Navy employs 250 or more civilian employees. An improved methodology was used, taking advantage of lessons learned since the previous publication of these data in 1986.

This report is approved for public release.

RICHARD J. NIEHAUS
Assistant for Human
Resources Analysis (OP-16H)

I. INTRODUCTION

The mid-1990s present a changing view of availability for persons in race, sex, and national origin groups. One important reason this view differs from projections for the early 1990s is that the movement of females into the labor force that prevailed in the previous decade has slowed considerably while the flow of males, especially Hispanics, is continuing to rise. As shown in this paper, the Navy forecasting and planning tools for estimating future human resource movements and their impacts necessitated enhanced local labor market analysis techniques.

Since occupations and jobs have changed from the early 1980s, matches between Navy civilian job groups and public data were also reviewed and updated to capture the dynamics of the labor market. These analytical method and data mapping changes provide Equal Employment Opportunity (EEO)/ Affirmative Action (AA) results that are consistent with past Navy program data, yet provide needed insights into the transitions that will occur in the mid 1990s. As in the early 1980s, when the Navy availability data presented one of the first views of the movement of women in the 1980s, the report results represent one of the first clear views of the 1990s.

The U.S. Navy has had a program for estimating external labor market availability and supply statistics covering its civilian work force since 1978. These data are used for a variety of purposes including the development of required

EEO/AA reports. This report provides the fourth version of Navy EEO availability data projected to 1996 for each of the 64 local labor markets in which the Navy employs 250 or more civilian employees. In this version, an improved reservation wage methodology and Census occupation mapping techniques are introduced. These enhancements have been added since the previous publication of these data in 1986. (See Atwater, Bres, Nelson, and Niehaus (1986)).

In 1986, the Civilian Occupation Planning Estimates System (COPES) project consolidated the analytical techniques and labor supply models to support the calculation of availability data. Public data sets, software, and utilities were transported to the Navy Department's Cleveland Consolidated Data Center (CDC). The AVAIL models of the COPES system were tested and then used to develop a series of availability data projections for the next ten years. Results of the updated and enhanced calculations are presented in this report. This new capability will allow a continued annual update of these data in future years. Further refinements will be accomplished with the planned update of COPES to accommodate the 1990 Census.

The data obtained from the analysis of the 1980 Census and the 1983-1989 public data files are being examined for use in a variety of different applications in addition to EEO. For example, the data may be used for such applications as economic impact studies of base closings on local labor markets. When the 1990 Census data benchmarks

are published in the early 1990s, a complete perspective on these changes will be possible to be presented.

This report is concerned with the presentation of availability data results from the COPES system's AVAIL models. Similar to previous research reports on labor market availability data, information is also presented on the analytical techniques used to determine the size and mix of the available labor force (ALF) for defined Navy jobs. The analytical information duplicates the text found in previous reports and provides a basis for "stand-alone" interpretation of the ALF results presented later in this report. A chronology of the previous reports can be found in Atwater, Bres, Nelson, and Niehaus (1986). Policy issues on using the data for EEO/AA purposes in the Department of Navy EEO Accountability System (DONEAS) are treated elsewhere.[1]

Appendix B contains the EEO availability data projected to 1996. These data are composites of the national and local projections as they relate to each local Navy labor market. A more detailed technical report on the AVAIL module, as an application of opportunity based labor supply modeling and analysis, can be found in Atwater (1988).

---

1 Currently the DONEAS reporting system is used for the internal monitoring of EEO/AA progress within the Department of Navy and for litigation support on issues requiring the use of available labor force data in connection with Title VII of the Civil Rights Act of 1964.

II. DEFINITIONS

The external labor market analysis being used seeks to match jobs with people using the characteristics shown in Figure 1. The initial step in the process is to specify the key characteristics of Navy jobs. Data on the current incumbents of jobs needs to be developed. In the Navy's case, this is done through the Computer Assisted Manpower Analysis System (CAMAS) using the Navy Civilian Personnel Data System (NCPDS) data files.

Specifying geographic areas corresponding to the recruitment area for the jobs is also important. Data on the external civilian populations from various public files for the relevant geographic areas are then evaluated. This evaluation will identify people "available" to begin the prescribed work. People are available if they qualify based on education and experience and are attracted to a

Figure 1: Data Categories and Sources for Matching Jobs and People

Navy job. In labor supply terminology, people who are attracted to a job find it to be an opportunity. To determine the attractiveness of a Navy job, specific economic criteria are set. These criteria, used in the AVAIL models, are described later in this report.

a. Job Characteristics

Specific jobs can be grouped into occupational and pay level categories. The Department of Navy Occupation Level (DONOL) code structure was used to combine jobs into occupation and pay level categories. This is a three-tiered occupational coding structure, coupled with a grade/level grouping code. The first two occupational groupings are shown in Figure 2. For the white collar General Schedule (GS), DONOL major occupation groups can be made to correspond to the professional, administrative, technical, clerical, and other GS (PATCO) coding scheme of the Office of Personnel Management (OPM). This can be done as follows:

PATCO	DON Major Occupation Groups
P - Professional	2 - Scientists and Engineers 3 - Other Professional
A - Administrative	4 - Administrative
T - Technical	1 - Science and Engineering Technicians 5 - Other Technicians
C - Clerical	6 - Clerical
O - Other	7 - Other General Schedule

MAJOR OCCUPATION GROUP:

1	Engineering & Science Technicians
2	Scientists and Engineers
3	Other Professionals
4	Management & Administrative
5	Other Technicians
6	Clerical
7	Other General Schedule
8	Craftsmen & Mechanics
9	Operatives & Service Workers

SKILL GROUP:

White Collar

10	Engineering & Science Technicians
22	Scientists
23	Engineers
24	Mathematicians
30	Accountants
32	Legal
33	Education

87	Woodworkers
88	Painters
89	Miscellaneous Craftsmen & Mechanics
90	Operatives & Service Workers

Figure 2: Department of Navy Occupation-Level (DONOL) Code Structure

These Navy occupation groupings are matched with Bureau of Census occupational codes to use data from the 1980 Census and the 1983-1989 Current Population Survey data bases. This matching process was previously done when the coding system was changed from the 1970 to 1980 Census. With the introduction of microcomputers, other technology, and changing private sector organizations throughout the 1980s, jobs have changed. For this report, the occupation mapping process was reviewed to update matches for changes in Navy jobs over the six years since the original mapping was done.

As recorded in Atwater, Bres, Nelson, and Niehaus (1986), considerable effort was spent in the original study to precisely define the geographic areas of the local labor markets. Grouping of the wage or pay levels is done according to the level definitions in the DONAL codes. For the GS and similar groups, the pay levels as of December 1989 were used. For the local jobs, estimated pay ranges in the area were developed using the NCPDS data base. For the national jobs, December 1989 annual pay ranges were calculated as follows:

GS 5-8 ($15,738-28,070)

GS 9-12 ($23,846-44,957)

GS 13-15 ($41,121-74,303).

The levels for the trades and labor occupations are Apprentice, Semi-skilled, Journeyman, Leader, and Supervisor, with the prevailing local wages applying. It should be noted that the pay levels overlap so that persons

could be "available" for more than one job.

Each Navy job is characterized by a wage band. For example, a craftsmen and mechanics apprentice job which pays a minimum of $8.00 an hour and a maximum of $13.00 per hour would have a wage band of ($8.00-$13.00). While the minimum and maximum wage levels for Navy jobs change is done annually, the AVAIL models convert the current dollar wage levels into 1967 dollar equivalents. This process eliminates the effects of inflation.

Minimum educational and experience levels are set for selected job categories. The criteria for the nationally recruited professional and higher level administrative job categories are provided in an earlier report (Atwater, Bres, Niehaus, and Sheridan (1983)). For all other jobs and levels, a high school education requirement is included.

b. People Characteristics

The data on people were obtained from the 1980 Census EEO Special File[2] and from the 1983-89 Current Population Survey (CPS) March files. The data was developed using eight races or national origin and sex groups (i.e., White, Black, Hispanic, Other (Asian/Pacific Islander), and Native American) - Male and Female).

---

2 For a complete description of this file, see Census of Population, 1980: Equal Employment Opportunity Special File Technical Documentation (Washington, D.C. Data User Services Division, Bureau of Census, 1982).

The data on employment status[3] at time of hire covers: (1) unemployed, (2) employed full-time, (3) employed part-time, and (4) not in the work force (i.e., in school, etc.). These employment status categories include all possible hiring pools.

c. Geographic area

The geographic areas used in the current analysis are an updated version of the areas specified in developing the original availability estimates (Atwater, Niehaus, and Sheridan (1980)). The split between national and local job categories remains the same as shown in Figure 3.

III. METHODOLOGY

The EEO availability data for a given local Navy labor market are a composite of results from the national and local AVAIL models of the COPES system. This section of the report provides a general review of the analytical techniques. A more detailed theoretical discussion of the labor market supply model and methodology is provided in Atwater (1988).

a. Available Labor Force (AVAIL) Models

The sequential selection process, which is the analytical basis for the available labor force model, is

---

3 A full-time worker is one who recorded working 35-47 hours last week and 48-52 weeks the previous year.

Figure 3 U.S. Navy Geographic Criteria for Labor Market Supply Ratios

shown in Figure 4. (The numbers used in Figure 4 are for illustrative purposes only). The AVAIL model examines all persons in the civilian labor force to determine who would find a specific Navy job to be an opportunity.

As shown in Figure 4, a civilian population of 2000 persons is used as a starting point. Suppose 1200 persons are in the Civilian Labor Force (CLF), as defined by the U.S. Department of Labor,[4], and the remainder (800) are not in the CLF. Persons in the CLF are members of occupation specific subgroups. Examples include Managers, Clerical, Craftsmen, and Professionals. The occupation specific subgroups are associated with pre-defined job categories. In Figure 4, 150 persons are in a pre-defined job category (X), and of the persons not in the CLF, 50 persons were in that same job category (X) when last employed. The 150 persons in the occupation specific job group can be further sorted into the following categories: full-time workers (100), part-time workers (35), and currently unemployed (15). These groups are the ALF for job category (X). CLF counts and ALF results, therefore, represent different types of information about the size and mix of persons in the labor market for a job.

Calculating ALF results is essentially a sorting and selection process. Specific criteria for determining the

---

4 The Department of Labor defines the civilian labor force (CLF) as: all civilian persons 16 years or older who are currently at work or are actively looking for work.

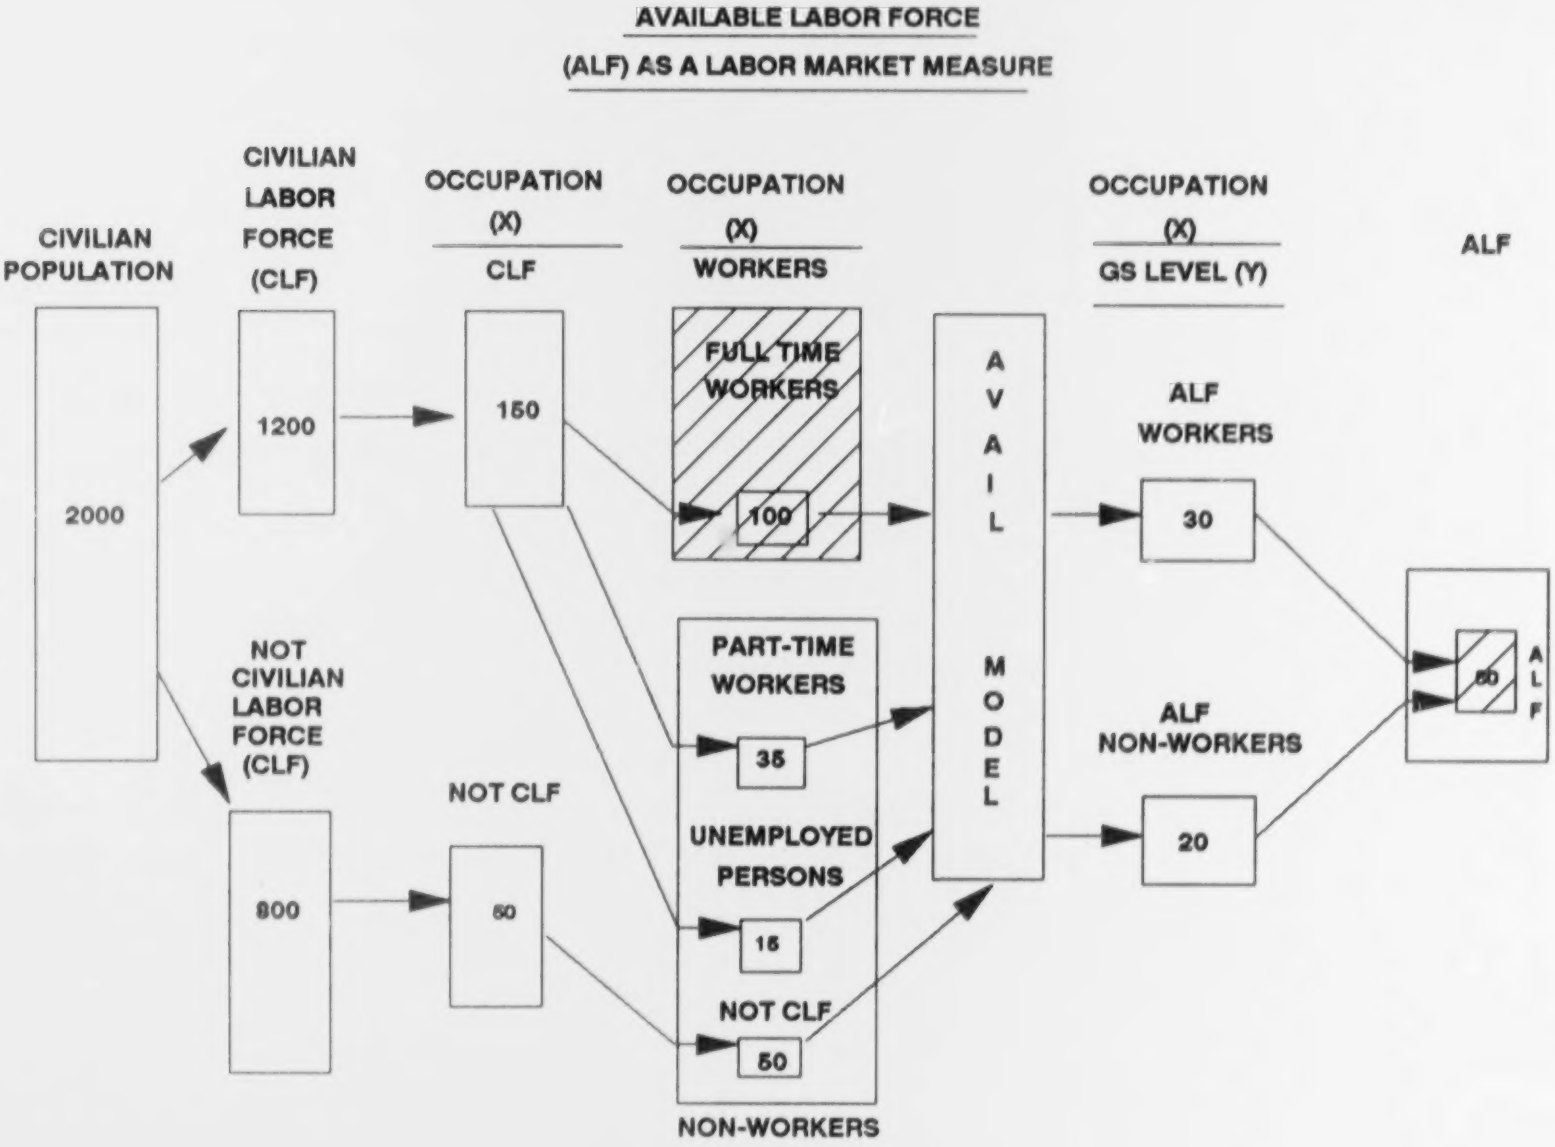

FIGURE 4: AVAILABLE LABOR FORCE (ALF) DETERMINATION

Figure 4: Available Labor Force (ALF) Determination

attractiveness of jobs for individual records from the Bureau of the Census are focused upon to define the analytical processes. The AVAIL model criteria and public data sources used to develop the availability data result are discussed below.

Individual records included in the measurement process for the available labor force were obtained from the 1980 Census EEO Special File and the 1983-1989 March CPS. For those persons in the civilian labor force who work full-time, the public data can be matched directly to the jobs. For persons who are not currently working full-time in the civilian labor force, an economic analysis technique called the reservation wage methodology is used[5].

A key enhancement to this version of the methodology is an improved reservation wage calculation. In previous versions, a "national" reservation wage was used -- one for females and one for males. As personal computer technology improved, a successful method for calculating reservation wages allowed for estimation for each of the Navy's sixteen geographic regions.[6] Local area reservation wages distinguish key differences between race, sex, and

---

5 For a more comprehensive discussion of the reservation wage methodology see Atwater and Sheridan (1980), Chapter 4 to Niehaus (1979), and Atwater (1988).

6 A maximum likelihood probit regression capability for equations with multiple independent variables was integrated into the STATA PC software package. This software facilitated the estimation of local reservation wage coefficients.

national origin groups so that more definitive views of how non-workers will be available for the mid-1990s can be calculated. These more accurate estimates have been incorporated into the calculations used in the reports in Appendix B.

Workers who have earned wages that fall within a defined Navy job's offered wage band are said to be wage available. For persons who are not currently working, an "expected" or reservation wage is calculated and used to match up with the Navy's offered wage band. The reservation wage is defined as "the minimum wage needed to attract a person to begin work in a defined job".

The AVAIL models rely on the following economic decision-making criteria:

(1) A full-time worker will find a job attractive (i.e., an opportunity) if his or her current market wage is more than the job's minimum and less than the job's maximum wage.

(2) A person who is not working full-time finds a job to be an opportunity if the job's wage band bounds the value he or she would give up by working.

As discussed above, the available labor force includes persons who are unemployed, employed part-time, and who are not in the labor force (i.e., housewives and discouraged workers) as well as current workers in comparable jobs. Only persons who are institutionalized (in hospitals, penal institutions, or in school) or are under 16 years or over 65

years of age are excluded from the matching or sorting process. Both workers and non-workers are processed through the same three-step sorting sequence.

Workers and non-workers who meet the wage criteria must also qualify based on the educational and occupational skill/ experience requirements for a job to make it an opportunity. Because wage bands, skill requirements, and educational factors are overlapping across Navy jobs, persons are often available for more than one specified job.

Other pertinent data such as increased college enrollments of minorities and women are also factored into the calculation of future ALF standards for the professional. For example, white female graduates from management, business, and professional programs are increasingly represented in accounting specialties. Projections for future representation levels reflect these movements.

The accuracy of the availability analysis requires that persons identify opportunities that can be compared and the best option acted upon. The statistical procedure used for the calculation of reservation wages is a refined version of regression analysis. It begins with the public data files excluding no potential worker. A regression analysis based on education, experience, and wage data is used to yield estimated market wage offers. These results, in turn, are used with additional data on work hours, wages, number of children, alternative wages, and education to estimate the likelihood of full-time annual work for persons in different

groups.

The overall work decision process for workers and non-workers is then overlayed with Navy data to estimate the value of time and attractiveness of Navy jobs for selected race or national origin and sex (RNS) groups. Counts of RNS groups from the 1980 Census EEO Special File are benchmarked to obtain the potential available for specific job categories. Trended data from the 1983-1989 CPS data are used so that changes in the availability of minorities and women can be tracked and projected to 1996.

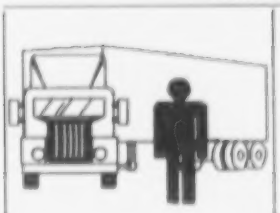
b. The Matching Process

The first step of the matching process is to extract from public file (i.e., Census, etc.) necessary data for the geographic area involved. The matching process to determine who is available for a specific Navy job uses the following three sorting criteria: a wage factor, an occupational skill/experience factor, and an education factor. For craft journeyman positions, three illustrative criteria might be: (1) ($10.50-$15.50) per hour wage band, (2) previous craft work experience required, and (3) no specified minimum years of completed education required. Persons who meet the criteria for a specific job are counted in the available labor force.

An example of the sorting process is shown in Figure 5. Here are three individual records (Census Identification

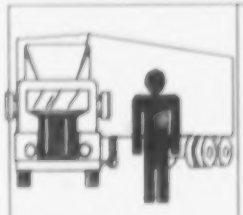
METHODOLOGY

I. Obtain the People Data for the Geographic Area Involved



Census I.D.	305	415	2012
Sex	Male	Female	Male
Race/ National Origin	Black	White	Asian
Wage	$5.50	$7.00	$12.00
Education	13 Years	12 Years	16 Years
Occupation	Truck Driver	Housewife	Scientist

II. Run the Process for Each Job Category



SORT CRITERIA	JOB DESCRIPTION			
Wage Sort	$6.00-$14.00		✓	✓
Education Sort	16			✓
Occupation Sort	Scientist			✓
	AVAILABLE:	☐	☐	☑

III. Obtain the Proportions

Count all "available" persons for each job and provide the RNS proportions for the specific job categories

Figure 5: External Available Labor Force (ALF) Methodology

Codes 305, 415, and 2012) and a Navy job (paying $6.00-$14.00 per hour), requiring 16 years of education (a college education with a background in science). All the individuals obtained in step one are run through a decision table for the job as shown in step two. In this case, Census I.D. No. 2012 is the only one which fits all the required criteria.

In an actual application, all persons in a given labor market are examined for each Navy job. The result is the establishment of the proportions of the "available" force by RNS group for a specific set of jobs. If 500 persons are "available" for a Navy job and 100 are black females, then the proportion of black females would be 20%. The available external group of persons for a Navy job is referred to as the ALF.

c. Validity Analysis

It is important in any study of this nature that a rigorous validity analysis be conducted. This analysis ensures that the results can be reported to a level of confidence consistent with the intended use. Since the numbers (sample sizes) vary by job category, RNS group, and labor market, the chance of error also varies with larger expected errors associated with smaller numbers for the group in question. We found that the current AVAIL model yielded statistically similar errors to those recorded in

Atwater, Bres, Nelson, and Niehaus (1986). The results of these latest computations were well within the normal statistically accepted parameters.

IV. AVAILABILITY RESULTS

As previously discussed, the EEO availability statistics are a composite of national and local estimates, using both national and local model results. The 1996 projections for the 64 local Navy labor markets are provided in Appendix B.

The Scientist and Engineer, Other Professional, and GS 13-15 Administrative DONOL major occupation group projections were developed using weighted combinations of more detailed national data at the DONOL skill group level. To obtain the Scientist and Engineer, Other Professional, and GS 13-15 Administrative data, the national DONOL skill group projections were reweighted according to the occupational concentrations in each local Navy labor market in December 1989. For example, in those areas with large medical facilities, proportionally larger weights were used for the medical personnel included in the Other Professional Category. The end result is national availability data weighted according to the concentrations of Navy jobs in each local Navy labor market.

The local available labor force results are calculated using the AVAIL local model. Data from the 1983-1989 March CPSs were used to calculate job specific take rates for

available workers and non-workers from the occupation specific CLF bases. Occupation specific civilian labor force bases were calculated for each of the 64 local Navy labor markets from the 1980 Census EEO Special File. They were projected annually through 1996. Finally, the take rate data developed for each labor market was multiplied by the projected base levels to yield forecasted ALF results. The proportionate share for a given RNS group is calculated as the percentage that group is of the local ALF.

As data from the 1990 Census becomes available, the AVAIL results will be updated to reflect a new baseline for the year 2000 and beyond. A comprehensive review will be conducted of all the parameters and tables used in the analysis with the computer software updated accordingly. Included will be another review of occupational and labor market definitions to reflect current and expected demographic trends.

The AVAIL models and results are expected to be used for a variety of purposes. In addition to its use in DONEAS, an application is being developed to assess the economic impacts of base closings on local labor markets. In preparation for the decade ahead, we will be summarizing the dynamics of labor markets throughout the 1990s. These findings will be published to highlight the substantial differences between the 1980s and 1990s. A reference document is expected later this year with a follow-on report after the 1990 Census results have been developed.
